

PM Ammo has entered into a modernization era with the Army that developed a new Non-Electric Ignitors for the M18A1 Claymore Mine. The item is now described as; Mine, Anti-Pers M18A1 with Non-Electric initiation system (100 Ft Shock Tube), DODIC J007. The Mine is the same fragmentation anti-personnel mine containing 700 steel balls and 682 grams of composition C4 explosive. It is now command detonated using an M81 igniter to start the explosive train to activate the blasting cap at the end of the shock-tube.
